

Career Opportunity#1: Production Operator

The Production Operator is a key player in our manufacturing team, responsible for operating machinery and ensuring the smooth production of high-quality goods. This role involves following schedules, conducting quality checks, and maintaining equipment. Attention to detail, problem-solving skills, and a commitment to safety are crucial. The Production Operator collaborates with the team to meet production targets and uphold quality standards. If you excel in a hands-on environment and are ready to contribute to our dynamic production process, we invite you to apply and be a vital part of our success.

KEY RESPONSIBILITIES:

- Executing the required processes/procedures for the maintenance of production and product quality.
- Executing the required processes/procedures for the maintenance of equipment and machinery in collaboration with other departments.
- Compliance with high standard requirements and GMPs in collaboration with other departments.
- Executing the packaging and coding of products, semi-finished products, or pieces according to their operating instructions.

Career Opportunity#2: Quality Control Inspector

The Quality Inspector is a vital member of our team, focused on ensuring the highest standards of product quality. Responsible for conducting thorough inspections, the Quality Inspector meticulously examines materials and finished products to identify deviations from established criteria. Attention to detail, a keen understanding of quality standards, and the ability to use inspection tools are essential for success in this role. The Quality Inspector collaborates with various departments to address quality concerns, supports continuous improvement initiatives, and ensures adherence to regulatory requirements.

KEY RESPONSIBILITIES:

- Executing the required processes/procedures for the sampling, testing, measuring, and documenting of production quality to ensure compliance with all requirements.
- Quality controls and control of compliance with specifications:
 - Incoming goods / raw material
 - Raw material packaging
 - Intermediate product manufacturing
 - Fiber spinning process
 - Fiber quality up to the packaged finished product
 - All quality-relevant production processes
